

TRACING THE GROWTH OF THE GLOBAL OMUNICATION: A POPULATION FORECASTING ANALYSIS

1.INTRODUCTION

1.1Overview

The world's population is more than three times larger than it was in the mid-twentieth century.

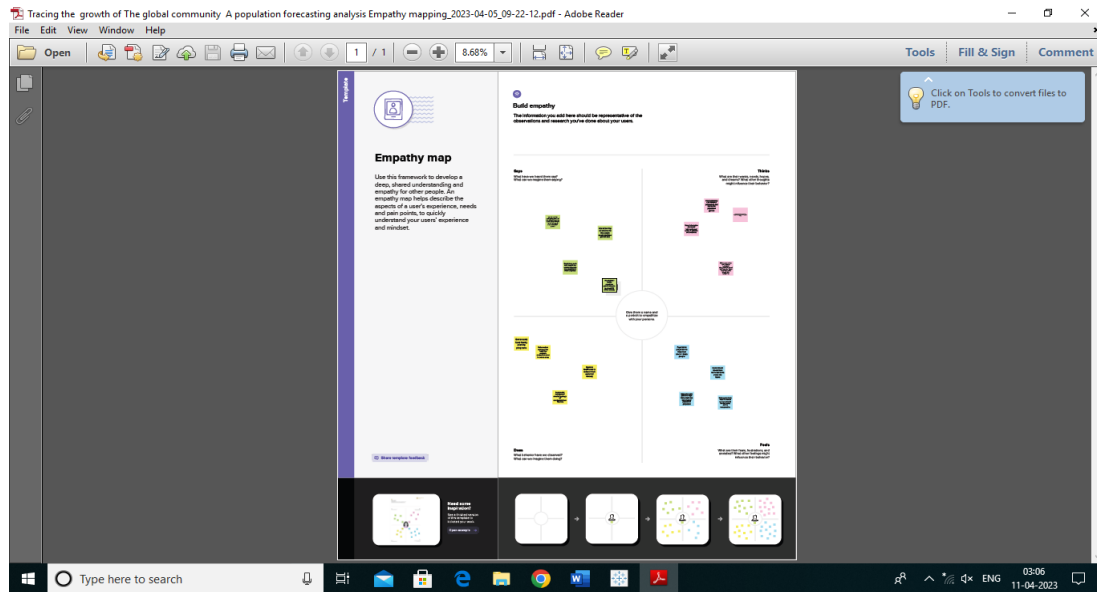

Pittenger and Smith et al make it clear that choice of projection method depends upon a number of factors. What factors do these authors identify as important when making the choice of forecasting method

1.2Purpose

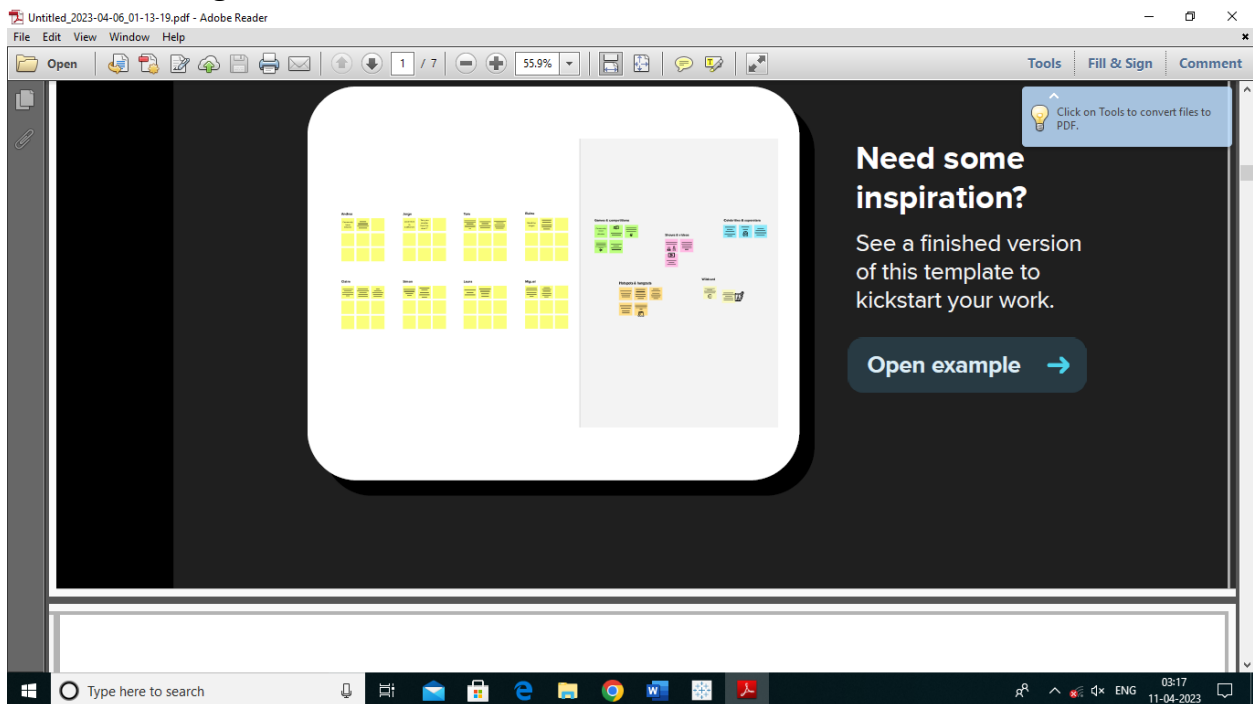

Population projections can be used as a tool to provide information on possible scenarios of future population and, namely, to support decision-making processes in diverse socio-economic areas, such as, higher education institutional network planning, both in public and private sectors.

4. ADVANTAGES & DISADVANTAGES

ADVANTAGES:

One of the biggest advantages of forecasting is that it enables the manager to plan for the future of the organization.

DISADVANTAGES:

Forecasts are Never Completely Accurate-Forecasts are never 100% and it is almost impossible to predict the future with certainty.

5.APPLICATIONS

Population forecasting is defined as the method of determining the expected population for a particular design period of a water supply system with the help of the study and analysis of future events and available records.

6.CONCLUSION

India is one of the largest countries in the world. Its distance from east to west is 2,933 km. As has already been pointed out in other chapters, its total population as per 2011 Census is 1.21 billion, which is being said to have already crossed to 1.25 billion.

7.FUTURE SCOPE

The world's population is expected to increase by nearly 2 billion persons in the next 30 years, from the current 8 billion to 9.7 billion in 2050 and could peak at nearly 10.4 billion in the mid-2080s.
